**DETAILED ACTION**

***Response to Amendment***

1. **Claims 1 & 44** have been cancelled as requested.
2. **Claims 2 & 45** have been amended to incorporate the limitations of the independent claims they originally depended on, and therefore include the previously objected to allowable subject matter, and examined as such.
3. **Claims 3-9, 39-40, & 46-47** have been amended to represent their new dependencies and have been examined as such.

***Allowable Subject Matter***

4. **Claims 2 & 45** are allowed as amended.
5. **Claim 41** is allowed as presented.
6. **Claims 3-9 & 39-40** are allowed as amended, dependent on **claim 2**.
7. **Claims 42-43** are allowed as presented, dependent on **claim 41**.
8. **Claims 46-47** are allowed as amended, dependent on **claim 45**.
9. **Claim 2** was previously objected to as being dependent upon a rejected base claim, and the provision that these claims would be allowable if rewritten in independent form including all of the limitations of the base claim (independent **claim 1**), was put forth in the Office Action dated 29 April 2009.
10. **Claim 45** was previously objected to as being dependent upon a rejected base claim, and the provision that these claims would be allowable if rewritten in independent form including all

of the limitations of the base claim (independent **claim 44**), was put forth in the Office Action dated 29 April 2009.

11. Applicant's Amendments filed 19 June 2009 successfully meet the requirements and the objection is therefore withdrawn.

12. The following is an examiner's statement of reasons for allowance:

13. As related to amended independent **claims 2 & 45**, as well as independent **claim 41**, an additional search was conducted and the existing prior art of record as well as additional cited art fails to teach or fairly suggest the image forming apparatus and method for conveyance of a recording medium comprising all of the structural components and limitations as claimed. While the prior art teaches a control part that adjusts the amount of the electric charges on the surface of the recording medium and the additional cited art teaches a surface resistance measurement part configured to detect a surface resistance value of the recording medium, there would have been no motivation to combine these references. The present application claims a control part configured to adjust an amount of electric charges on a surface of the recording medium by the positive and negative electric charges applied to said conveyance belt and continues to claim a surface resistance measurement part configured to detect a surface resistance value of the recording medium wherein said control part adjusts the amount of electric charges on the surface of the recording medium (by induction from the conveyance belt) not by directly charging the paper. As the additional cited art teaches charging the paper directly, it would teach away from charging the paper inductively through the conveyance belt and the control means to do such. Therefore there would have been no motivation to combine the additional cited art with the combination of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawabata (US 2007/0120936 A1) teaches a resistance measurement unit that measures the resistance of the conveyance belt. Shigeta et al. (US 6,347,200 B1) teaches an image forming apparatus with a controller that charges the paper for deposition of toner in specified regions for the formation of the image and a resistance measurement unit that measures the resistance of the medium for proper charging by the controller.
